
Priority Resource Concerns (CPS 647): Terrestrial & Aquatic Wildlife Habitat (Early Successional Food, Nesting, Brood-Rearing, Escape Cover)
Primary Practice: Early Successional Habitat Development–Management (Code 647)
Habitat evaluation shows site is static/trending to late succession AND native seed bank / rootstock can regenerate post-disturbance
Unresolved Spreadsheet Resource Concerns? (Prescribed Fire, Invasive Weeds, Supplemental Seeding, Erosion, Livestock)
Disturbance & Invasive Control (CPS 647): Prescribed Burning (338), Firebreak (394), Brush Mgmt (314), Herbaceous Weed Treatment (315), Woody Residue Treatment (384)
Supplemental Seeding & Forest Mgmt (CPS 647): Wildlife Habitat Planting (420), Conservation Cover (327), Range Planting (550), Forest Stand Improvement (666)
Erosion & Livestock Management (CPS 647): Prescribed Grazing (528), Fence (382), Access Control (472), Critical Area Planting (342)
Is native seed bank depleted (seeding/planting required)?
Yes
No - Adequate Seed Bank
SEEDING REQUIRED FIRST Use Wildlife Habitat Planting (420), Conservation Cover (327), or Range Planting (550)
Is primary objective timber production or invasive weed eradication alone?
Yes
No - Set Back Succession for Habitat
OUT OF SCOPE FOR 647 Use Forest Stand Improvement (666), Brush Mgmt (314), or Weed Treatment (315)
Select Program / Objective & CAPP Narrative Code
Narrative: 00N-CRP-R CRP Re-enrollment: Maintain existing early successional habitat
Narrative: 00N Early Successional Habitat: Manage plant succession to develop/maintain early seral stage
Apply rotational disturbance (≤ 1/3 per year) per CRP contract outside nesting season.
Existing Vegetative Cover & Landscape Setting?
1. Open Herbaceous / Pasture / Field Edge / Pivot Corner
2. Abrupt Forest-to-Field Transition ('Hard Edge')
3. Overgrown / Closed-Canopy Scrub-Shrub Stand
4. Closed-Canopy or Degraded Forest Stand
Primary Disturbance Goal: Height Diversity vs. Bare Ground?
Tree Removal Method: Hand Tools vs. Heavy Machinery?
Mowing Woody Encroachment & Create Height Heterogeneity
Disking Dense Sod to Create Bare Ground for Annual Forbs
Hand Tools (Chainsaws + Stump Herbicide)
Heavy Machinery (Dozer / Mechanical Clearing)
Scenario 1: Mowing (\$327.33/ac)
Scenario 2: Disking (\$204.93/ac)
Scenario 49: Edge Feathering (30–50 ft felled shrub zone; \$808.55/ac)
Scenario 70: Creating Early Successional Habitat in Overgrown Scrub-Shrub (\$1,490.52/ac)
Scenario 91: Creating Early Successional Habitat Forest Opening w/ Hand Tools (\$1,862.80/ac)
Scenario 112: Creating Early Successional Habitat Forest Opening w/ Machinery (\$2,006.66/ac)

Operation & Maintenance (CPS 647): Rotate treatments across adjacent blocks every 2–5 yrs before canopy closure; schedule disturbances outside primary nesting/brood-rearing seasons
