
Priority Resource Concerns (CPS 390): Water Quality/Quantity, Streambank Stability, Fish & Wildlife/Pollinator Habitat, Plant Condition
Primary Practice: Riparian Herbaceous Cover (Code 390)
Site is transitional zone adjacent to perennial, intermittent, or ephemeral watercourse/waterbody
Unresolved Spreadsheet Resource Concerns? (Livestock Access, Up-Gradient Erosion, Invasive Weeds, Woody Cover)
Livestock & Access Control (CPS 390): Fence (382), Access Control (472), Prescribed Grazing (528A), Stream Crossing (578), Watering Facility (614), Heavy Use Area (561)
Up-Gradient & Bank Stabilization (CPS 390): Streambank Protection (580), Critical Area Planting (342), Filter Strip (393), Stream Habitat Imp. (395)
Site Prep, Pest & Habitat Mgmt (CPS 390): Brush Mgmt (314), Herbaceous Weed Treatment (315), Riparian Forest Buffer (391), Conservation Cover (327), Early Successional Habitat (647)
Is channel & streambank stability adequate to support practice?
No - Unstable Banks
Yes
DO NOT INSTALL 390 ALONE Stabilize channel/banks first using Streambank & Shoreline Protection (580)
Is native seed bank present & natural regeneration adequate?
Yes
No - Seeding/Plugging Needed
PLANTING NOT REQUIRED Use natural regeneration + Access Control (472) or Prescribed Grazing (528)
Select Primary Objective & CAPP Narrative Code
Narrative: 00N-CRP-R CRP Re-enrollment: Maintain existing riparian herbaceous cover
Narrative: 00N Basic Riparian Cover: Narrow strip (min. 2.5x stream width or 35 ft) to slow water & trap nutrients
Narrative: 01N Fish & Wildlife Design: Wide strip with diverse native grasses, forbs, & varying bloom times
Narratives: 02N & 03N Width Expansion: Increase width of existing cover to boost efficacy
Manage existing stand per CRP contract. Mow/disturb ≤ 1/3 per year outside nesting/fawning season.
Select Species Mix & Establishment Method
Stiff-stemmed grasses only (Water Quality / Bank Stability)
Standard Native Grass & Forbs (Wildlife / Pollinator Diversity)
Specialized / High-Cost Seed (Specific Ecological Site / Habitat)
Severe Hydrology / Scour Risk (Requires Live Sprigs + Seed)
Scenario 39: Grass No-till/range drill adapted grasses ($1,026.38/ac)
Scenario 40: Native Grass and Forbs Diverse native grass & forb mix ($1,026.38/ac)
Scenario 41: Specialized Seed Specialized native seed mix ($1,443.13/ac)
Scenario 44: Plugging and Seeding Combined seeding & live sprigging ($7,038.68/ac)

Operation & Maintenance (O&M): Defer grazing ≥ 2 yrs until established; control pests; inspect up-gradient erosion
